

LIFE SCIENCES

With real-world experience ranging from basic research to the pharmaceutical industry, our life sciences and biotechnology team understands the unique challenges that apply to this rapidly changing field. For example, our attorneys and agents are experienced in managing the delicate balance between the desire for broad claim scope and compliance with the written description and enablement requirements. WHDA serves biotechnology clients from small universities and government agencies to large pharmaceutical corporations, and effectively communicates with each. Example technologies include:

- › Pharmaceuticals
- › Genetic Engineering
- › Stem cells
- › Microarrays
- › Medical devices
- › Agricultural biotechnology
- › Recombinant DNA techniques
- › Antibodies
- › Therapeutic methods
- › Diagnostic/screening methods
- › Transgenic animals
- › Vaccines
- › Artificial bone technologies
- › Laboratory techniques and reagents
- › Gene therapy
